PLEASE READ THESE INSTRUCTIONS BEFORE USE

DO NOT TRANSFER TO A SYRINGE
SEVERE OVERDOSE CAN RESULT?

www.lilly.ca

Read the Instructions for Use before you start taking Humalog® and each time you get another Humalog 200 units/mL KwikPen®. There may be new information. This information does not take the place of talking to your healthcare professional about your medical condition or your treatment.

Humalog 200 units/mL KwikPen is a disposable prefilled pen containing 600 units of Humalog insulin lispro injection (rDNA origin). You can give yourself multiple doses using one Pen. The Pen dial's 1 unit at a time. You can give from 1 to 60 units in a single injection. If your dose is more than 60 units, you will need to give yourself more than one injection. The plunger only moves a little with each injection, and you may not notice that it moves. The plunger will only reach the end of the cartridge when you have used all 600 units in the Pen.

This Pen is designed to allow you to give more doses than other pens you may have used in the past. Dial your usual dose as instructed by your healthcare professional. Humalog KwikPen is available in two strengths, 100 units/mL and 200 units/mL. Inject Humalog 200 units/mL ONLY with your Pen. DO NOT transfer insulin from your Pen to a syringe. Syringes will not measure 200 units/mL insulin correctly. A severe overdose can result, causing very low blood sugar which may put your life in danger.

Humalog 200 units/mL KwikPen (“Pen”) is a disposable prefilled pen containing 600 units of HUMALOG® [insulin lispro injection (rDNA origin)]. You should use a new Needle for each injection and repeat the priming step. You may give an injection to them or get an infection from them.

This Pen is not recommended for use by the blind or visually impaired without the help of someone trained to use the Pen.

Preparing your Pen

How to recognize your HUMALOG 200 units/mL KwikPen:

- Pen color:
  - Dark grey
- Dose Knob:
  - Dark grey with burgundy ring on the end
- Labels:
  - Burgundy, “200 units/mL” in yellow box, checkerboard design.
  - “0” is seen in the Dose Window

Supplies needed to give your injection:

- HUMALOG 200 units/mL KwikPen
- KwikPen compatible Needle (BD Pen Needles recommended)
- Alcohol swab

Preparing your Pen

- Wash your hands with soap and water.
- Check the Pen to make sure you are taking the right type of insulin. This is especially important if you use more than 1 type of insulin.
- Do not use your Pen past the expiration date printed on the Label or for more than 28 days after you first start using the Pen.
- Always use a new Needle for each injection to help prevent infections and blocked Needles.

Step 1:
- Pull the Pen Cap straight off.
  - Do not remove the Pen Label.
  - Wipe the Rubber Seal with an alcohol swab.
  - Do not use if it is cloudy, colored, or has particles or clumps in it.

Step 2:
- Select a new Needle.
- Pull of the Paper Tab from the Outer Needle Shield.

Step 3:
- Push the capped Needle straight onto the Pen and twist the Needle on until it is tight.

Step 4:
- Pull off the Outer Needle Shield. Do not throw it away.
- Pull off the Inner Needle Shield and throw it away.

Priming your Pen

Prime before each injection.

- Priming your Pen means removing the air from the Needle and Cartridge that may collect during normal use and ensures that the Pen is working correctly.
- If you do not prime before each injection, you may get too much or too little insulin.

Step 5:
- To prime your Pen, turn the Dose Knob to select 2 units.

Step 6:
- Hold your Pen with the Needle pointing up. Tap the Cartridge Holder gently to collect air bubbles at the top.

Step 7:
- Continue holding your Pen with Needle pointing up. Push the Dose Knob in until it stops, and “0” is seen in the Dose Window. Hold the Dose Knob in and count to 5 slowly.
  - If you do not see insulin, repeat the priming steps, but not more than 8 times.
  - If you still do not see insulin, change the Needle and repeat the priming steps.

Selecting your dose

This Pen has been designed to deliver the dose that is shown in the window. Dial your usual dose as instructed by your healthcare professional.
- You can give from 1 to 60 units in a single injection.
  - If your dose is more than 60 units, you will need to give more than one injection.
  - If you need help deciding how to divide up your dose, ask your healthcare professional.
  - You should use a new Needle for each injection and repeat the priming step.

Step 8:
- Turn the Dose Knob to select the number of units you need to inject. The Dose Indicator should line up with your dose.
  - The Pen dial's 1 unit at a time.
  - The Dose Knob clicks as you turn it.
  - Do NOT dial your dose by counting the clicks because you may dial the wrong dose.
  - The dose can be corrected by turning the Dose Knob in either direction until the correct dose lines up with the Dose Indicator.
  - The odd numbers, after the number 1, are shown as full lines.
  - Always check the number in the Dose Window to make sure you have dialed the correct dose.

Step 9:
- The Pen will not let you dial more than the number of units left in the Pen.
  - If you need to inject more than the number of units left in the Pen, you may either:
    - Inject the amount left in your Pen and then use a new Pen to give the rest of your dose, or
    - get a new Pen and inject the full dose.
  - It is normal to see a small amount of insulin left in the Pen that you cannot inject. Do not transfer this to a syringe. Severe overdose can result.

See other side for more information
Disposing of Pens and Needles

After your injection

• Do not try to change your dose while injecting.

Step 9:

• Choose your injection site.
  HUMALOG is injected under the skin (subcutaneously) of your stomach area, buttocks, upper legs or upper arms.
• Prepare the injection site as directed by your healthcare professional.

Step 10:

• Insert the Needle into your skin.
• Push the Dose Knob all the way in.
• Continue to hold the Dose Knob in and slowly count to 5 before removing the Needle.
• Do not try to inject your insulin by turning the Dose Knob. You will NOT receive your insulin by turning the Dose Knob.

Step 11:

• Pull the Needle out of your skin.
  – A drop of insulin at the Needle tip is normal. It will not affect your dose.
• Check the number in the Dose Window
  – If you see “0” in the Dose Window, you have received the full amount you dialed.
  – If you do not see “0” in the Dose Window, do not redial. Insert the Needle into your skin and finish your injection.
• If you still do not think you received the full amount you dialed for your injection, do not start over or repeat that injection. Monitor your blood glucose as instructed by your healthcare professional.

The plunger only moves a little with each injection, and you may not notice that it moves. If you see blood after you take the Needle out of your skin, press the injection site lightly with a piece of gauze or an alcohol swab. If you see blood before removing the Needle, and air from entering the Pen, do not remove the Needle.

After your injection

Step 12:

• Carefully replace the Outer Needle Shield.

Step 13:

• UnscREW the capped Needle and dispose of it as described below (see Disposing of Pens and Needles section).
• Do not store the Pen with the Needle attached to prevent leaking, blocking the Needle, and air from entering the Pen.

Step 14:

• Replace the Pen Cap by lining up the Cap Clip with the Dose Indicator and pushing straight on.

Troubleshooting

• If you cannot remove the Pen Cap, gently twist the cap back and forth, and then pull the cap straight off.
• If the Dose Knob is hard to push:
  – Pushing the Dose Knob more slowly will make it easier to inject.
  – Your Needle may be blocked. Put on a new Needle and prime the Pen.
  – You may have dust, food, or liquid inside the Pen. Throw the Pen away and get a new Pen.
• Do not transfer insulin from the Pen to a syringe. Severe overdose can result.

If you have any questions or problems with your HUMALOG 200 units/mL KwikPen, contact your healthcare professional or Lilly at 1-888-545-5972 for help. For more information on HUMALOG 200 units/mL KwikPen and insulin, go to www.lilly.ca.
